During the last two months a wave of popular protests has shaken vast regions of the Arab world, in the Middle East and northern Africa.

The oppressed people fair indignation has lead to revolutionary changes which the world hegemonic powers are trying to manipulate, opportunistically and with premeditation. The imperial interference has been particularly shamelessness regarding the complex circumstances existing in Libya, while the great media corporations are competing to legitimate the already announced occupation.

The intellectuals, artists and social fighters of the network in defense of humankind declare that the difficult internal situation the Libya people is living today should be peacefully resolved with a strict respect for their self determination, with no foreign interference and guarantying their territorial integrity.

We support the unity and peace initiative of the political council of the alba-tcp to create an "international humanitarian commission for the peace and integrity of libya" proposed by the president of the Venezuela bolivarian republic, Hugo Chávez.

We reject the OTAN troop's mobilization and the United States government and armed forces interventionist declarations.

We support the libyan people with the certainty they would conduct the solutions which contribute to reach stability and peace in this northern african country
